OPPORTUNITIES

Opportunity **Estimated Savings**

Eliminate render-blocking resources

1.91 s ^

Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles. Learn more. FCP [LCP]

✓ Show 3rd-party resources (5)

URL	Transfer Size	Potential Savings
0.9.1/jquery.modal.min.css (cdnjs.cloudflare.com)	2.5 KiB	780 ms
base/jquery-ui.css (code.jquery.com)	8.9 KiB	930 ms
3.5.1/jquery.min.js (ajax.googleapis.com)	31.2 KiB	1,230 ms
/jquery.datetimepicker.full.min.js (p14-front-end-hr-net.vercel.app)	20.6 KiB	600 ms
0.9.1/jquery.modal.min.js (cdnjs.cloudflare.com)	2.4 KiB	150 ms
1.12.1/jquery-ui.js (code.jquery.com)	122.3 KiB	900 ms

Reduce unused JavaScript

■ 0.53 s ^

Reduce unused JavaScript and defer loading scripts until they are required to decrease bytes consumed by network activity. Learn more. [LCP]

URL	Transfer Size	Potential Savings	
1.12.1/jquery-ui.js (code.jquery.com)	122.3 KiB	99.2 KiB	

Minify JavaScript

0.3 s ^

Minifying JavaScript files can reduce payload sizes and script parse time. Learn more. FCP [LCP]

URL	Transfer Size	Potential Savings
1.12.1/jquery-ui.js (code.jquery.com)	122.3 KiB	44.1 KiB

These suggestions can help your page load faster. They don't directly affect the Performance score.

DIAGNOSTICS

Does not use passive listeners to improve scrolling performance

Source

Consider marking your touch and wheel event listeners as 'passive' to improve your page's scroll performance. Learn more.

Show 3rd-party resources (1)

Does not have a <meta name="viewport"> tag with width or initial-scale

/jquery.datetimepicker.full.min.js:1:55352 (p14-front-end-hr-net.vercel.app)

No `<meta name="viewport">` tag found

...3.5.1/jquery.min.js:2:41540 (ajax.googleapis.com)

A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input. Learn more. TBT

First Contentful Paint (3G) — 5560 ms

First Contentful Paint 3G marks the time at which the first text or image is painted while on a 3G network. Learn more.

Avoid chaining critical requests — 9 chains found

The Critical Request Chains below show you what resources are loaded with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn more. FCP [LCP]

Maximum critical path latency: 100 ms

Initial Navigation

https://p14-front-end-hr-net.vercel.app

/app.js (p14-front-end-hr-net.vercel.app) - 40 ms, 1.63 KiB

O Largest Contentful Paint element — 1 element found

This is the largest contentful element painted within the viewport. Learn More [LCP]

Element Create Employee <h2>

Avoid large layout shifts — 2 elements found

These DOM elements contribute most to the CLS of the page. [CLS]

O Avoid long main-thread tasks — 3 long tasks found

Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. Learn more TBT

URL	Start Time	Duration
3.5.1/jquery.min.js (ajax.googleapis.com)	2,054 ms	111 ms
1.12.1/jquery-ui.js (code.jquery.com)	2,760 ms	100 ms
3.5.1/jquery.min.js (ajax.googleapis.com)	2,165 ms	64 ms

More information about the performance of your application. These numbers don't directly affect the Performance score.

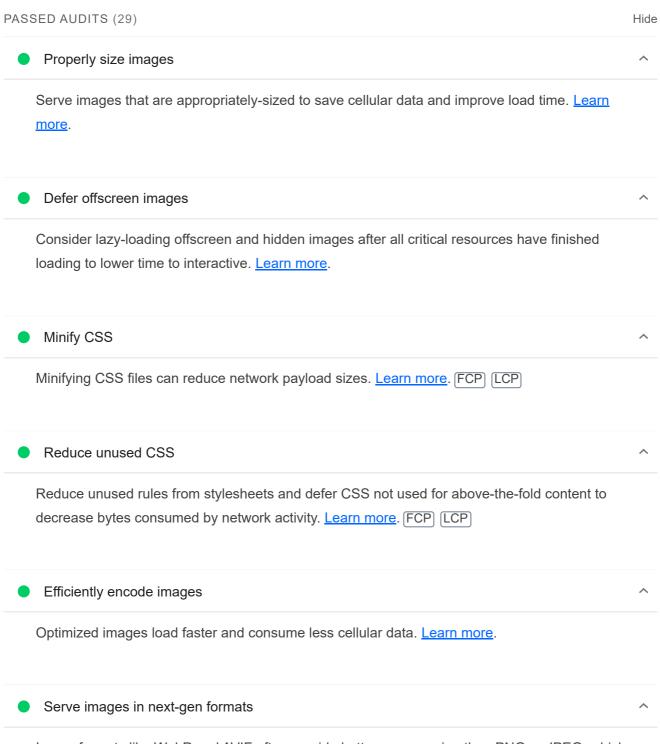

Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. Learn more.

Enable text compression

Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. Learn more. FCP [LCP]

Preconnect to required origins

Consider adding `preconnect` or `dns-prefetch` resource hints to establish early connections to important third-party origins. <u>Learn more</u>. FCP [LCP]

● Initial server response time was short — Root document took 40 ms

Keep the server response time for the main document short because all other requests depend on it. <u>Learn more</u>. FCP [LCP]

URLTime Spenthttps://p14-front-end-hr-net.vercel.app40 ms

Avoid multiple page redirects

Redirects introduce additional delays before the page can be loaded. Learn more. FCP [LCP]

Preload key requests

Consider using `<link rel=preload>` to prioritize fetching resources that are currently requested later in page load. <u>Learn more</u>. [FCP] [LCP]

Use video formats for animated content

Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more

Remove duplicate modules in JavaScript bundles

Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. (TBT)

Avoid serving legacy JavaScript to modern browsers

Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. Learn More TBT

Preload Largest Contentful Paint image

Preload the image used by the LCP element in order to improve your LCP time. Learn more. [LCP]

Avoids enormous network payloads — Total size was 204 KiB

Large network payloads cost users real money and are highly correlated with long load times. Learn more. [LCP]

✓ Show 3rd-party resources (6)

URL	Transfer Size
1.12.1/jquery-ui.js (code.jquery.com)	122.3 KiB
3.5.1/jquery.min.js (ajax.googleapis.com)	31.2 KiB

Uses efficient cache policy on static assets — 0 resources found

A long cache lifetime can speed up repeat visits to your page. Learn more.

Avoids an excessive DOM size — 606 elements

A large DOM will increase memory usage, cause longer style calculations, and produce costly layout reflows. Learn more. TBT

Statistic	Element	Value
Total DOM Elements		606
Maximum DOM Depth	1 <div></div>	9
Maximum Child Elements	19501951195219531954195519561957195819591960196119621963196419 65196619671968196 <div style="margin-top: 0px;"></div>	101

User Timing marks and measures

Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more.

JavaScript execution time — 0.4 s

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. Learn more. TBT

✓ Show 3rd-party resources (2)

URL	Total CPU Time	Script Evaluation	Script Parse
3.5.1/jquery.min.js (ajax.googleapis.com)	369 ms	322 ms	6 ms
https://p14-front-end-hr-net.vercel.app	100 ms	12 ms	5 ms
1.12.1/jquery-ui.js (code.jquery.com)	85 ms	47 ms	37 ms
Unattributable	53 ms	5 ms	0 ms

Minimizes main-thread work — 0.6 s

Consider reducing the time spent parsing, compiling and executing JS. You may find delivering smaller JS payloads helps with this. Learn more TBT

Category	Time Spent
Script Evaluation	400 ms

Category	Time Spent
Other	88 ms
Script Parsing & Compilation	54 ms
Style & Layout	41 ms
Parse HTML & CSS	40 ms
Rendering	11 ms

All text remains visible during webfont loads

Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more. FCP LCP

Minimize third-party usage — Third-party code blocked the main thread for 150 ms

Third-party code can significantly impact load performance. Limit the number of redundant thirdparty providers and try to load third-party code after your page has primarily finished loading. Learn more. TBT

Third-Party	Transfer Size	Main-Thread Blocking Time
Google CDN	31 KiB	154 ms
3.5.1/jquery.min.js (ajax.googleapis.com)	31 KiB	154 ms
jQuery CDN	139 KiB	0 ms
1.12.1/jquery-ui.js (code.jquery.com)	122 KiB	0 ms
base/jquery-ui.css (code.jquery.com)	9 KiB	0 ms
images/ui-icons_777777_256x240.png (code.jquery.com)	8 KiB	0 ms
Cloudflare CDN	5 KiB	0 ms

Lazy load third-party resources with facades

Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. Learn more. TBT

Largest Contentful Paint image was not lazily loaded

Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more.

For users on slow connections, external scripts dynamically injected via `document.write()` can delay page load by tens of seconds. <u>Learn more</u>.

Avoid non-composited animations

Animations which are not composited can be janky and increase CLS. Learn more CLS

Image elements have explicit width and height

Set an explicit width and height on image elements to reduce layout shifts and improve CLS. <u>Learn</u> more [CLS]

Avoids unload event listeners

The `unload` event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache. Use `pagehide` or `visibilitychange` events instead. <u>Learn more</u>

Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

ARIA

ARIA input fields do not have accessible names

When an input field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more</u>.

```
Alabama

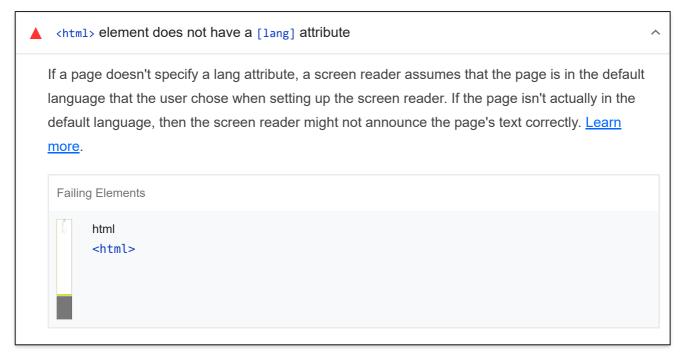

<span tabindex="0" id="state-button" role="combobox" aria-expanded="false" aria-autocomplete="list" aria-owns="state-menu" aria-haspopup="true" class="ui-selectmenu-button ui-selectmenu-button-closed ui-corner-all ui-button u...">

Sales

<span tabindex="0" id="department-button" role="combobox" aria-expanded="false" aria-autocomplete="list" aria-owns="department-menu" aria-haspopup="true" class="ui-selectmenu-button ui-selectmenu-button-closed ui-corner-all ui-button u...">
```

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

INTERNATIONALIZATION AND LOCALIZATION

These are opportunities to improve the interpretation of your content by users in different locales.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Hide

The page has a logical tab order
 Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more.
 Interactive controls are keyboard focusable
 Custom interactive controls are keyboard focusable and display a focus indicator. Learn more.
 Interactive elements indicate their purpose and state

Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn more. The user's focus is directed to new content added to the page If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn more. User focus is not accidentally trapped in a region A user can tab into and out of any control or region without accidentally trapping their focus. Learn more. Custom controls have associated labels Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. Learn more. Custom controls have ARIA roles Custom interactive controls have appropriate ARIA roles. Learn more. Visual order on the page follows DOM order DOM order matches the visual order, improving navigation for assistive technology. Learn more. Offscreen content is hidden from assistive technology Offscreen content is hidden with display: none or aria-hidden=true. Learn more. HTML5 landmark elements are used to improve navigation. Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more.

These items address areas which an automated testing tool cannot cover. Learn more in our guide on <u>conducting an accessibility review</u>.

PASSED AUDITS (16)

[aria-*] attributes match their roles

Each ARIA `role` supports a specific subset of `aria-*` attributes. Mismatching these invalidates the `aria-*` attributes. Learn more.

[aria-hidden="true"] is not present on the document <body>

Assistive technologies, like screen readers, work inconsistently when `aria-hidden="true"` is set on the document `<body>`. Learn more.

• [role]s have all required [aria-*] attributes

Some ARIA roles have required attributes that describe the state of the element to screen readers. <u>Learn more</u>.

[role] values are valid

ARIA roles must have valid values in order to perform their intended accessibility functions. <u>Learn</u> more.

[aria-*] attributes have valid values

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more.

• [aria-*] attributes are valid and not misspelled

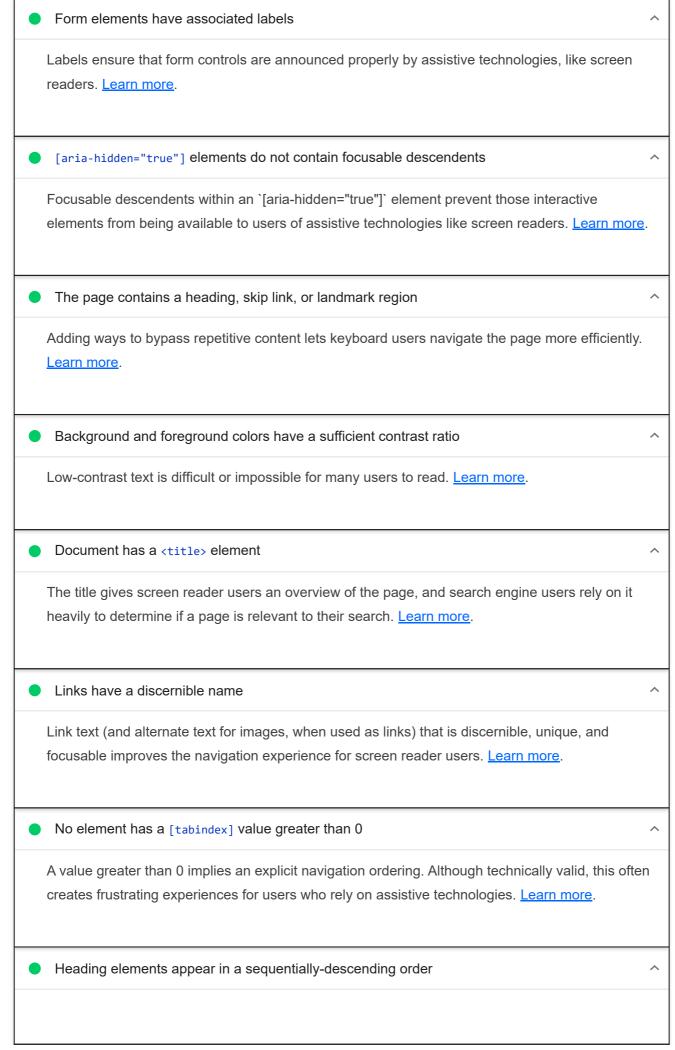

Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more.

Buttons have an accessible name

When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. <u>Learn more</u>.

ARIA IDs are unique

The value of an ARIA ID must be unique to prevent other instances from being overlooked by assistive technologies. <u>Learn more</u>.

Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. <u>Learn more</u>.

NOT APPLICABLE (26) Hide [accesskey] values are unique Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more. O button, link, and menuitem elements have accessible names When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more. ARIA meter elements have accessible names When an element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more. ARIA progressbar elements have accessible names When a 'progressbar' element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more. Elements with an ARIA [role] that require children to contain a specific [role] have all 0 required children. Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more. [role]s are contained by their required parent element Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. Learn more. ARIA toggle fields have accessible names When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn more.

ARIA tooltip elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a general name, making it unusable for users who rely on screen readers. <u>Learn more</u> .	С
O ARIA treeitem elements have accessible names	^
When an element doesn't have an accessible name, screen readers announce it with a generical name, making it unusable for users who rely on screen readers. Learn more.	С
<pre><dl>'s contain only properly-ordered <dt> and <dd> groups, <script>, <template> or <div> elements.</pre></td><td>^</td></tr><tr><td>When definition lists are not properly marked up, screen readers may produce confusing or inaccurate output. <u>Learn more</u>.</td><td></td></tr><tr><td>O Definition list items are wrapped in <dl> elements</td><td>^</td></tr><tr><td>Definition list items (`<dt>` and `<dd>`) must be wrapped in a parent `<dl>` element to ensure screen readers can properly announce them. <u>Learn more</u>.</td><td>that</td></tr><tr><td>O [id] attributes on active, focusable elements are unique</td><td>^</td></tr><tr><td>All focusable elements must have a unique `id` to ensure that they're visible to assistive technologies. Learn more.</td><td></td></tr><tr><td>O No form fields have multiple labels</td><td>^</td></tr><tr><td>Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. Learn more.</td><td></td></tr><tr><td><frame> or <iframe> elements have a title</td><td>^</td></tr><tr><td>Screen reader users rely on frame titles to describe the contents of frames. <u>Learn more</u>.</td><td></td></tr><tr><td>O <html> element has a valid value for its [lang] attribute</td><td>^</td></tr><tr><td>Specifying a valid <u>BCP 47 language</u> helps screen readers announce text properly. <u>Learn more</u></td><td><u>.</u></td></tr><tr><td>O Image elements have [alt] attributes</td><td>^</td></tr><tr><td>Informative elements should aim for short, descriptive alternate text. Decorative elements can ignored with an empty alt attribute. <u>Learn more</u>.</td><td>be</td></tr></tbody></table></script></dd></dt></dl></pre>	

<pre></pre>	^
When an image is being used as an ` <input/> ` button, providing alternative text can help screer reader users understand the purpose of the button. <u>Learn more</u> .	า
O Lists contain only elements and script supporting elements (<script> and <template>).</td><td>^</td></tr><tr><td>Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. <u>Learn more</u>.</td><td>een</td></tr><tr><td>O List items (<1i>) are contained within or parent elements</td><td>^</td></tr><tr><td>Screen readers require list items (``) to be contained within a parent `` or `` to be announced properly. Learn more.</td><td></td></tr><tr><td>The document does not use <meta http-equiv="refresh"></td><td>^</td></tr><tr><td>Users do not expect a page to refresh automatically, and doing so will move focus back to the of the page. This may create a frustrating or confusing experience. Learn more.</td><td>top</td></tr><tr><td>[user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximum-scale] attribute is not less than 5.</td><td>^</td></tr><tr><td>Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. <u>Learn more</u>.</td><td></td></tr><tr><td>O <object> elements have alternate text</td><td>^</td></tr><tr><td>Screen readers cannot translate non-text content. Adding alternate text to `<object>` elements helps screen readers convey meaning to users. <u>Learn more</u>.</td><td></td></tr><tr><td>Cells in a element that use the [headers] attribute refer to table cells within the same table.</td><td>^</td></tr><tr><td>Screen readers have features to make navigating tables easier. Ensuring `` cells using the `[headers]` attribute only refer to other cells in the same table may improve the experience for screen reader users. Learn more.</td><td>•</td></tr><tr><td>elements and elements with [role="columnheader"/"rowheader"] have data cells they describe.</td><td>^</td></tr><tr><td>Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. <u>Learn more</u>.</td><td>6</td></tr></tbody></table></script>	

O [lang] attributes have a valid value

Specifying a valid <u>BCP 47 language</u> on elements helps ensure that text is pronounced correctly by a screen reader. <u>Learn more</u>.

<video> elements contain a <track> element with [kind="captions"]

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. <u>Learn more</u>.

Best Practices

TRUST AND SAFETY

Includes front-end JavaScript libraries with known security vulnerabilities — 3 vulnerabilities detected

Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. <u>Learn more</u>.

Library Version	Vulnerability Count	Highest Severity
jQuery UI@1.12.1	3	High

Ensure CSP is effective against XSS attacks

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. Learn more

Description	Directive	Severity
No CSP found in enforcement mode		High

BROWSER COMPATIBILITY

Page lacks the HTML doctype, thus triggering quirks-mode

Document must contain a doctype

Specifying a doctype prevents the browser from switching to quirks-mode. Learn more.

GENERAL

Detected JavaScript libraries

All front-end JavaScript libraries detected on the page. Learn more.

Name	Version
jQuery	3.5.1
jQuery UI	1.12.1

PASSED AUDITS (11) Hide

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding <u>mixed content</u>, where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. <u>Learn more</u>.

Avoids requesting the geolocation permission on page load

Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. <u>Learn more</u>.

Avoids requesting the notification permission on page load

Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. <u>Learn more</u>.

Allows users to paste into password fields

Preventing password pasting undermines good security policy. <u>Learn more</u>.

Displays images with correct aspect ratio

Image display dimensions should match natural aspect ratio. Learn more.

Serves images with appropriate resolution

Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. <u>Learn more</u>.

Properly defines charset

A character encoding declaration is required. It can be done with a `<meta>` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. <u>Learn more</u>.

Avoids deprecated APIs

Deprecated APIs will eventually be removed from the browser. Learn more.

No browser errors logged to the console

Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. <u>Learn more</u>

No issues in the Issues panel in Chrome Devtools

Issues logged to the `Issues` panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.

Page has valid source maps

Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. <u>Learn more</u>.

NOT APPLICABLE (1)

Fonts with font-display: optional are preloaded

^

Preload `optional` fonts so first-time visitors may use them. Learn more

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on Core Web Vitals. Learn more.

MOBILE FRIENDLY

Does not have a <meta name="viewport"> tag with width or initial-scale

No `<meta name="viewport">` tag found

A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents <u>a 300 millisecond delay to user input</u>. <u>Learn more</u>. TBT

Document doesn't use legible font sizes

Text is illegible because there's no viewport meta tag optimized for mobile screens.

Font sizes less than 12px are too small to be legible and require mobile visitors to "pinch to zoom" in order to read. Strive to have >60% of page text ≥12px. <u>Learn more</u>.

Tap targets are not sized appropriately

Tap targets are too small because there's no viewport meta tag optimized for mobile screens

Interactive elements like buttons and links should be large enough (48x48px), and have enough space around them, to be easy enough to tap without overlapping onto other elements. <u>Learn more</u>.

Make sure your pages are mobile friendly so users don't have to pinch or zoom in order to read the content pages. <u>Learn</u> more.

CONTENT BEST PRACTICES

▲ Document does not have a meta description

Meta descriptions may be included in search results to concisely summarize page content. <u>Learn</u> more.

Format your HTML in a way that enables crawlers to better understand your app's content.

ADDITIONAL ITEMS TO MANUALLY CHECK (1)

Hide

Structured data is valid

Run the <u>Structured Data Testing Tool</u> and the <u>Structured Data Linter</u> to validate structured data. <u>Learn more</u>.

Run these additional validators on your site to check additional SEO best practices.

PASSED AUDITS (7)

Document has a <title> element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. <u>Learn more</u>.

Page has successful HTTP status code

^

Pages with unsuccessful HTTP status codes may not be indexed properly. Learn more.

Links have descriptive text

^

Descriptive link text helps search engines understand your content. Learn more.

Links are crawlable

^

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. <u>Learn More</u>

Page isn't blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. <u>Learn more</u>.

Document has a valid hreflang

hreflang links tell search engines what version of a page they should list in search results for a given language or region. <u>Learn more</u>.

Document avoids plugins

Search engines can't index plugin content, and many devices restrict plugins or don't support them. Learn more.

NOT APPLICABLE (3)

robots.txt is valid

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. <u>Learn more</u>.

Image elements have [alt] attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. <u>Learn more</u>.

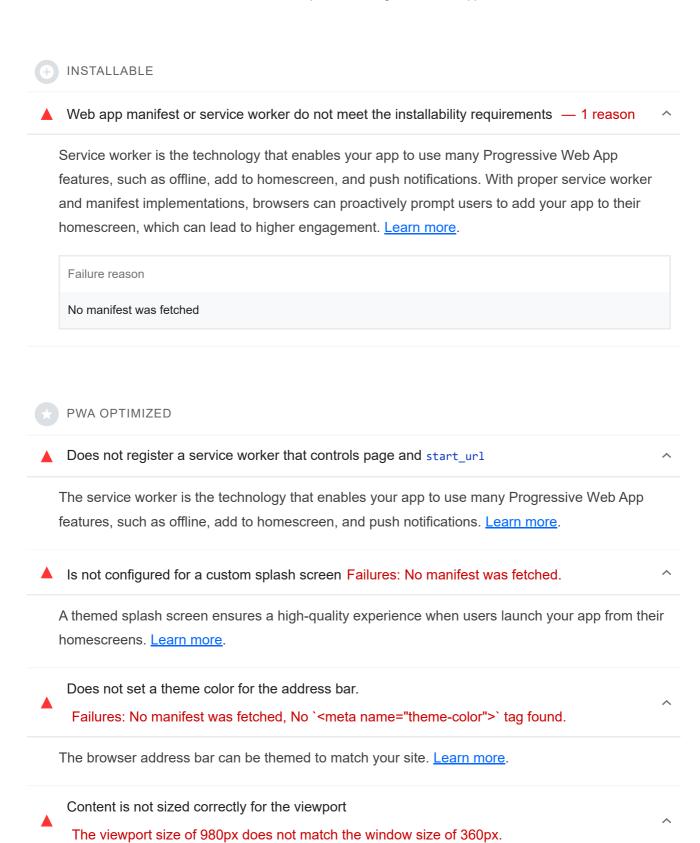

O Document has a valid rel=canonical

Canonical links suggest which URL to show in search results. Learn more.

PWA

These checks validate the aspects of a Progressive Web App. Learn more.

If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. <u>Learn more</u>.

Does not have a <meta name="viewport"> tag with width or initial-scale

No `<meta name="viewport">` tag found

A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents <u>a 300 millisecond delay to user input</u>. <u>Learn more</u>. (TBT)

▲ Does not provide a valid apple-touch-icon

For ideal appearance on iOS when users add a progressive web app to the home screen, define an `apple-touch-icon`. It must point to a non-transparent 192px (or 180px) square PNG. <u>Learn More</u>.

▲ Manifest doesn't have a maskable icon No manifest was fetched

A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. <u>Learn more</u>.

ADDITIONAL ITEMS TO MANUALLY CHECK (3)

Hide

Site works cross-browser

^

To reach the most number of users, sites should work across every major browser. Learn more.

Page transitions don't feel like they block on the network

^

Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. <u>Learn more</u>.

Each page has a URL

^

Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. <u>Learn more</u>.

These checks are required by the baseline <u>PWA Checklist</u> but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.
